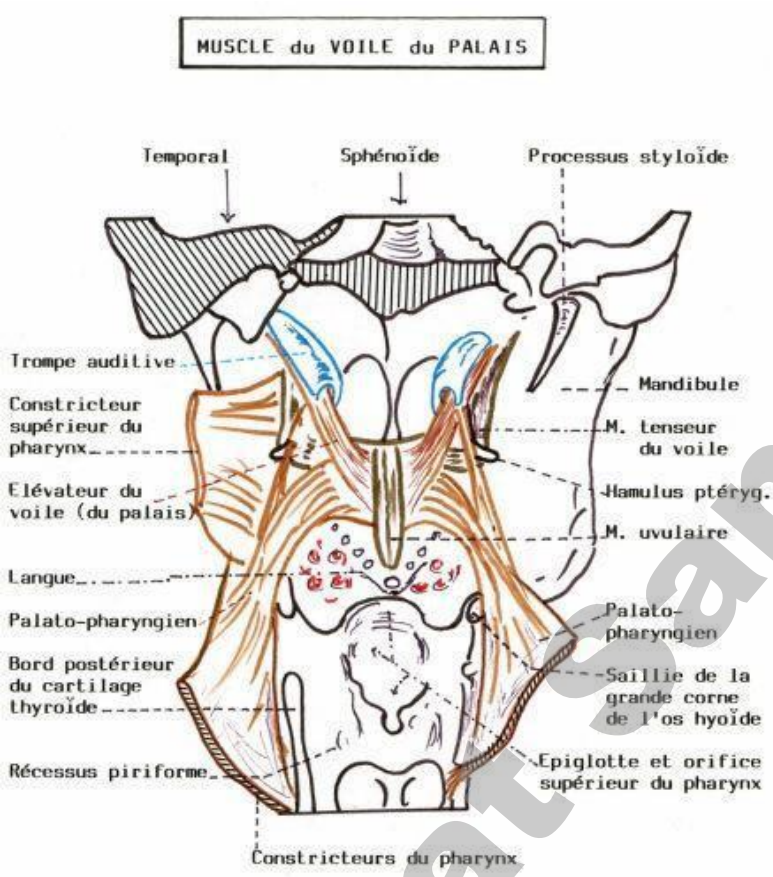
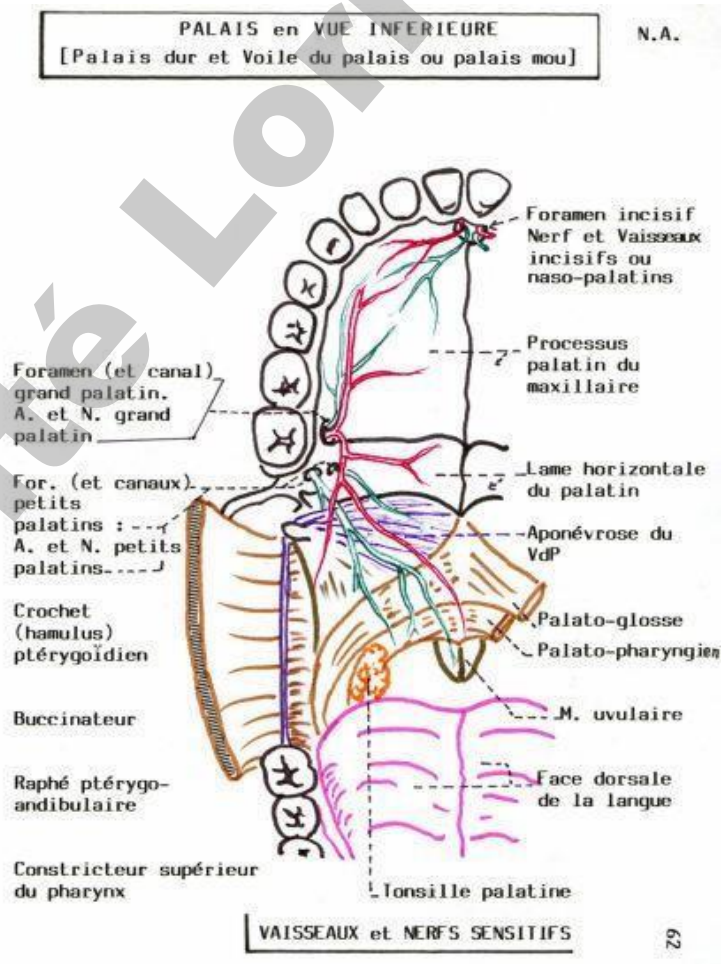
PALAIS – ARTICULATION TEMPORO-MANDIBULAIRE

I. PALAIS





La partie suivante n'est pas abordée de manière approfondie dans l'UE ATC mais plutôt dans l'UE Manducateur, bien que la professeure Strazielle en parle également en ATC à travers l'application de ces mêmes connaissances. Pour une meilleure compréhension de l'anatomie de l'articulation temporo-mandibulaire et de la mandibule, je vous invite à la consulter.

La partie sur la <u>cinétique</u> est traitée exclusivement dans l'UE Manducateur.
